

VebaBox®

The unique modular
cold chain solution

WHAT IS A VebaBox?

The VebaBox is a cool container for any brand and type of commercial van to transport products between -18°C and $+25^{\circ}\text{C}$. The VebaBox utilises an efficient cooling device which works on the power supply of the vehicle – or an external power supply – in order to freeze, cool or heat your cargo at the desired temperature.

What makes the VebaBox special is the fact that the box is easily removable and therefore also able to function as a refrigerated container outside the vehicle. Moreover, the vehicle can be employed for non-refrigerated transport in this way.

Because only wiring needs to be installed in the commercial vehicle, the trade-in value of your vehicle remains intact. As a result, the vehicle can be used for both temperature-controlled transport as well as normal transport.

In other words; the flexible solution for refrigerated transport for all temperature-sensitive products.

FEATURES OF A VebaBox?

Transferable

- * Investment can be divided over multiple vehicles
- * Vehicle can still be used for non-conditioned transport
- * VebaBox can easily be transferred to any other vehicle

Cools/heats even when the engine is not running

- * Shipment is always on the right temperature, GDP-certified
- * On site, the VebaBox functions as a cool container
- * Runs on 12/24V and 240V if so desired

Customisation

- * Capable of being installed in any commercial vehicle
- * Any size is possible
- * Possibility of different compartments with cool and freeze combinations

IVECO

| VebaBox Pharma

Flexible in conditioned transport

Converting your company van into a refrigerated van is a thing of the past thanks to the VebaBox. The VebaBox is a removable cooling container that can be placed in the cargo space of your vehicle with just a small modification.

Quality is of vital importance

In the absence of ensuring suitable conditions at any point in the supply chain, the efficacy of pharmaceuticals can be hugely affected and patients can be endangered. Vaccines are even more sensitive to temperature than regular medicines because they are usually biological in nature. Only if they are transported between 2°C and 8°C can the stability and shelf life of vaccines be guaranteed. VebaBox is the solution.

VebaBox Health |

Reliable conditioned transport

With blood products and vaccines, the effect and quality are highly dependent on the temperature. A reliable cold chain protects the performance of these products and limits the risks that can adversely affect the quality. With our knowledge in the field of active and passive cooling systems, we can design suitable solutions.

Flexible and Reliable

The VebaBox is not only more flexible than a refrigerated vehicle, but also less expensive. In addition to the fact that the purchase of a VebaBox is cheaper than a refrigerated vehicle conversion, the VebaBox can easily be transferred to the next vehicle after depreciation of your company van. This means you invest in a reliable cooling solution only once.

| VebaBox Food

Flexible refrigerated transport in the food sector

The logistical challenge to transport food under the right conditions is greater than ever. In the context of food safety, perishable food items must be stored at a legally prescribed temperature. VebaBox cool solutions can develop custom solutions for refrigerated transports that answer these challenges thanks to its flexible use of technology!

Fresh, traditional and organic

Besides food safety, today's consumers are more critical and expect high-quality products, with a key role for fresh, traditional and organic food. Consumers pay a higher price for these, and expect more. Organic products have a shorter shelf life, which is why temperature-controlled transport even more important.

VebaBox Custom |

Custom Solutions

No matter what products you transport, a VebaBox in your company van always gives you the right cooling solution. The VebaBox is available in any desired size and can be fully customised with different options and accessories. For the perfect solution for your unique business we have the perfect custom fit.

Live Tracking

We understand that there is always a need to keep on top of your shipment's and fleet's temperature logistics. We also have the option of installing and using live tracking on each of the VebaBoxes to manage shipments with precision, speed and knowledge using the latest sensor technology.

THE ALTERNATIVE TO A REFRIGERATED VAN

	Commercial vehicle with VebaBox	Refrigerated van
One-time investment	✓	✗
Quick cooling system repair	✓	✗
High residual value	✓	✗
Can be combined with non-conditioned transport	✓	✗
Different temperatures possible in one space	✓	✗
Cools while the vehicle engine is not running	✓	✗
Cools on location	✓	✓
Cools the entire cargo space	✗	✓
Low energy consumption	✓	✗
Automatic Heating	up to 25°C	✗

SERVICE

Service is only a matter of seconds thanks to the VebaBox innovative design. The detachable thermal units, which provide the cooling capacity, can easily be replaced in the unlikely event of malfunction. This means that a VebaBox is always on the road!
